SHOWCASE

Riverside City Hall - Riverside, CA, USA

Located about an hour east of Los Angeles, Riverside, California is proud of its commitment to arts, innovation, and green initiatives. For two decades, the city has celebrated these initiatives with the annual Festival of Lights, a five-week holiday merriment including decorations and lights throughout the downtown area. Along the Festival Route sits Riverside's City Hall, a red brick structure with distinctive architectural arches that are classic Riverside as seen by day but disappears as night approaches. The city realized the importance of incorporating the building into the Festival by illuminating the unique façade with Traxon Wall Washer Shield AC XB fixtures. To meet the visual requirements, 23 Wall Washer Shield AC XB fixtures were installed to replace the existing metal halide lamps, and ensure that the building was bathed in high quality illumination. Controlled via e:cue Butler XT2 and e:cue Glass Touch T12, the colors, patterns, and timing of the lighting display can be managed from inside the building by the city's own employees for the festival and throughout the year. Not only did the Traxon & e:cue solution meet the visual demands, but the complete system of LEDs and control technologies reduces the city's energy consumption from illuminating City Hall by over 90 percent, translating to savings of over \$16,000 in reduced energy costs per year. A joint effort between the city of Riverside, Traxon & e:cue, OSRAM SYLVANIA, and Entertainment Lighting Services, the city was able to achieve the dual goal of reducing energy consumption and creating an icon for downtown Riverside.
