

# SHOWCASE

## P-ZONE Munakata – Fukuoka, Japan

The illuminated façade of the P-ZONE Munakata, one of the iconic and dazzling malls in Fukuoka, is appealing like a beautiful rainbow over the building, designed to draw the attention to all even they are far from distance. The mall façade shines glamorously with a dynamic LED light installation from Traxon & e:cue dynamic lighting solution. The LED illumination façade is comprised of 130 Traxon Dot XL-6 RGB, featuring versatile color-changing LEDs to illuminate the exterior of the mall. The Dot XL-6 system is also the perfect solution for vivid accent, text, graphics and video replay for the outdoor environments during the daylight viewing. Various dynamic lighting sequences are controlled via 2 e:cue Video Micro Converter (VMC). The 360 degree of stunning and dynamic façade gives a unique character to P-ZONE Munakata, turning it into a more attractive and eye-catching urban landmark for its citizens and visitors.
