

SHOWCASE

i Light Marina Bay 2016 “C’scape” – Singapore

OSRAM Lighting Solutions transformed lights to exhilarating experiences in i Light Marina Bay. The Asia’s exclusive sustainable light art festival exhibited 25 creative and sustainable light art installations by lighting talents from all over the world on 4 to 27 March 2016. The Marina Bay waterfront was converted to a kaleidoscopic display of light and shadows. OSRAM was honored to collaborate with Illuminate LD and Krislite to create light art installation “C’scape”. Inspired by reminiscence city skylines, the design concept was to engage visitors to integrate their shadows with the cityscapes in the installations. To illuminate a dynamic city skyline, 12 pieces of Traxon Washer Allegro XB-36 RGB were used to light up the exterior of the installation, creating dazzling color changing effects on the cityscapes’ silhouette. The center of C’scape was equipped with 2 pieces of Traxon String RGB, interpreting the dynamic time-lapse light display and evoking the symphysis between the blazing ray of the sun and subtle glow of moonlight. For pre-programmed effects of the dynamic lightings, Traxon LED Engine Smart 150W Indoor and e:cue Butler S2 were connected via a network switch that could send DMX control signals to the LED screen. With the intelligent installation, C’scape provided thought-provoking and energetic moments to visitors and conveyed the message of sustainable lighting for city nightscapes during the entire festival.
