

SHOWCASE

David H. Koch Theater, Lincoln Center – New York, USA

Located in New York's historic and renowned Lincoln Center, the David H. Koch lobby was brought to a new, vibrant life in October 2009. The ticket windows feature a wall glowing with white light; this clean and crisp installation is surfaced with custom cut Corian diffusion which tells the theatre's story in elegance and style. To emit a radiance capable of setting a mood of sophistication, New York's Tillotson Design Associates combined over 560 of Traxon's 1PXL Board Warm White to illuminate the interior of the corrugated façade enhancing a Corian panel cut precisely to give the illusion of an opera scene when viewed from one angle, and a ballet scene when viewed from the other, both in photographic grey scale. With control provided by an e:cue lighting control Butler and Butler XT, the Traxon 1PXL Boards' brightness can be adjusted as necessary.
